

PYTHON DATA ANALYSIS: EXERCISE

Quiz: Introduction to Python for Data Analysis

8/10

Week 1 Topics: Numpy and Pandas

Question 1: What is NumPy and what is its primary purpose in Python data analysis?

- ☒ a) NumPy is a library for data visualization
- ☐ b) NumPy is a library for numerical computing with Python
- ☐ c) NumPy is a library for machine learning algorithms
- ☐ d) NumPy is a library for web development

Question 2: Which of the following statements best describes the role of Pandas in Python data analysis?

- ☐ a) Pandas is primarily used for web scraping
- ☒ b) Pandas is a library for data manipulation and analysis
- ☐ c) Pandas is exclusively used for statistical modeling
- ☐ d) Pandas is a library for natural language processing

Question 3: In Python, what data structure does NumPy introduce to efficiently work with arrays?

- ☒ a) List
- ☐ b) Dictionary
- ☐ c) Array
- ☐ d) Set

Question 4: Which of the following is NOT a data structure commonly used in Pandas?

- ☐ a) Series
- ☐ b) DataFrame
- ☐ c) Array
- ☒ d) Panel

PYTHON DATA ANALYSIS: EXERCISE

Question 5: How can you create a Pandas DataFrame from a dictionary?

- a) Using the `pd.array()` function
- b) Using the `pd.DataFrame.from_list()` function
- ☒ c) Using the `pd.DataFrame()` constructor
- d) Using the `pd.Series()` constructor

Question 6: What is the primary function of the `head()` method in Pandas?

- a) It retrieves the last rows of a DataFrame
- ☒ b) It displays the first few rows of a DataFrame
- c) It sorts the DataFrame in ascending order
- d) It performs a statistical analysis on the DataFrame

Question 7: Which NumPy function is used to reshape arrays?

- ☒ a) `reshape()`
- b) `resize()`
- c) `rearrange()`
- d) `reform()`

Question 8: How can you access a specific column in a Pandas DataFrame?

- ☒ a) Using indexing like `dataframe[column_name]`
- b) Using the `get_column()` method
- c) Using the `retrieve_column()` function
- d) Using the `select_column()` method

Question 9: What function in Pandas is used to drop missing values from a DataFrame?

- a) `remove_missing()`
- ☒ b) `dropna()`
- c) `clean_data()`
- d) `discard_null()`

PYTHON DATA ANALYSIS: EXERCISE

Question 10: Which of the following is true regarding the usage of NumPy and Pandas together in Python data analysis?

- a) NumPy and Pandas cannot be used together
- ☒ b) NumPy is used for numerical computations while Pandas is used for data manipulation and analysis
- c) Pandas is a replacement for NumPy
- d) NumPy is used for data manipulation while Pandas is used for numerical computations

Do you seriously want to learn Python and Data Analysis with Python?

If you're serious about learning Python for Data Analysis and getting ready for data science roles with Python, I highly encourage you to enroll in my Complete Python Data Analysis Course. Don't waste your time following disconnected, outdated tutorials.

My Complete Python Course has everything you need in one place.

- Over 10 hours of HD video
- Unlimited access - watch it as many times as you want
- Self-paced learning - take your time if you prefer
- Watch it online or download and watch it offline
- One-on-one training with me 2-4 times a week

Sincerely,

Juma Shafara

ML Software Developer, Coding Instructor
