

python files exercise

April 29, 2024

It's important to close
files after opening them

```
[ ]: with open('example.txt', 'w') as file:
    file.write(' when updating the course materials shafara made changes_
↳bananas to ornages.\n')
    file.write('so there was a ststatement saying, Viola likes shafaras oranges.
↳\n')

with open("example.txt", "a") as file:
    file.write('oh God , this is so funny i feel like adding laughing emojis.
↳\n')
    file.write('hahahahaha haaahaaa.\n')
    file.write('okay this is the end.\n')

with open("example.txt", "r") as file:
    file_content = file.read()
    print(file_content)

import os

# os.remove("example.txt")
```

```
 when updating the course materials shafara made changes bananas to ornages.
so there was a ststatement saying, Viola likes shafaras oranges.
oh God , this is so funny i feel like adding laughing emojis.
hahahahaha haaahaaa.
okay this is the end.
```
